WORK EXPERIENCE

Backend / Full Stack Engineer (Contract)

Mar 2026 – Present

Astrogya

Bengaluru, India

- Architected monorepo SaaS platform (Next.js + React Native) with shared API layer and cross-platform auth
- Built a multi-agent RAG system powering an astrology-domain LLM for personalized, context-aware guidance
- Engineered multi-tier caching, parallel API orchestration (60+ RESTful endpoints) with retry/timeout/fallback
- Built secure Razorpay payment pipeline with idempotent webhooks, signature verification, atomic delivery
- Designed scalable backend (Postgres RLS, RPC) with credit metering and encrypted credential lifecycle

Full Stack Intern

Sep 2025 – Mar 2026

WowLabz

Bengaluru, India

- Assisted in building and scaling MERN application supporting 128K+ users with improved latency, caching efficiency, system reliability
- Designed multi-provider auth (JWT, OAuth, OTP, Argon2) with token rotation, and rate-limited endpoints across projects
- Developed 50+ endpoint REST API for a company handling booking lifecycle, RBAC workflows
- Integrated Salesforce CRM with circuit breaker, retry/backoff, and failure isolation for external dependency resilience
- Engineered Redis caching and async messaging (RabbitMQ) for high-throughput, fault-tolerant data synchronization
- Built e-commerce platform with versioned APIs and RBAC across multi-role commerce workflows
- Built low-latency multiplayer system using WebSockets with authoritative room lifecycle management, recognized for rapid execution
- Deployed containerized services on AWS with CI/CD pipelines and production monitoring

TECHNICAL SKILLS

Languages: JavaScript (ES6+), TypeScript, Python, SQL, HTML5/CSS3

Backend: Node.js, Express, FastAPI, RESTful APIs, GraphQL, Microservices

Frontend: React.js, Next.js, Redux Toolkit, Tailwind CSS, Three.js/WebGL

Databases: PostgreSQL, MySQL, MongoDB, Redis, Prisma ORM, Supabase

Cloud & DevOps: AWS (S3, EC2, Lambda), Docker, Kubernetes, CI/CD (GitHub Actions), Git, Linux

AI/ML: LLM Orchestration, LangChain, RAG, Multi-Agent Systems, NLP, Scikit-learn, XGBoost

Core Concepts: System Design, Distributed Systems, Event-Driven Architecture (RabbitMQ/Kafka), Authentication (OAuth2/JWT), Unit/Integration Testing (Jest, PyTest), Agile/Scrum, Jira

PROJECTS

Apbobbble – AI Agent Code Security Platform (Concept)

[Live Link](#)

- Designed a 5-product AI agent code-security platform (SentinelPR, PackTrace, CodeLineage, ScopeGuard, Forge) covering scanning, dependency, provenance, and permission risks
- Defined evaluation criteria per product – taint-analysis rules for vulnerability detection, registry checks for hallucinated packages
- Designed Forge, an RL environment shaping reward signals against OWASP/CWE classes to train agents toward secure code
- Built and deployed the platform's live site (Next.js, Vercel) with full product architecture and agent/CI integration mapping

ScaleApply – AI-Powered ATS (Job Platform)

[Demo Link](#)

- Built a decoupled microservices platform with a multi-agent LLM pipeline parsing PDF/DOC/DOCX résumés into structured candidate profiles in seconds
- Computed semantic candidate-to-role fit scores and automated skill-gap analysis, validating output accuracy across varied resume formats and edge cases
- Designed an asynchronous worker queue on Redis Streams to keep LLM event processing resilient and rate-limited under load
- Built a RAG knowledge chatbot on Qdrant for career/recruiting Q&A, with WebSocket alerts pushing real-time changes to recruiters and candidates

EDUCATION

SRM Institute of Science and Technology

Kattankulathur, Tamil Nadu, India

Master of Computer Applications (MCA - 8.7)

2023 – 2025

Yuvakshetra Institute of Management Studies

Palakkad, Kerala, India

Bachelor of Computer Applications (BCA)

2020 – 2023
